Everyone On The Planet Needs To Read This Book

By Ejeks

Internet security is becoming one of the world's most crucial hot sports when it comes to the internet. These days now everyone is online consciously or unconsciously so it's easy to get caught up in the net of really bad people if you are not careful enough.

Just think about it, hacking and being hacked is on the news almost every day. If big corporations like SONY can be hacked, then you should realise just how important it is to protect yourself. But with James book, you can be rest assured that you are covered.

The book is very detailed and covers just about all that you need to know about keeping yourself safe when on the internet but also you will get a crash cause in computer protection. You get to know how to deal with VPNs and Pop-Ups; those can be really annoying.

Great book on how to protect your computer!

By Brady Black

Fantastic book on how to protect your computer from viruses, hacking and much much more. Packed with a ton of useful and practical information so you never have to worry about your computer again. I found the book easy to read and very helpful in understanding anti-virus software, and how to use VPN and other internet tools. Also goes into detail on social networking sites and email accounts. Very good info! Highly

recommended!

This book is a useful tool to helping you to prevent something like that ...

By Celestial

I remember a family member of mine was a victim of someone hacking into his Facebook account. Cybercrime is not uncommon nowadays. This book is a useful tool to helping you to prevent something like that happening from you. Recently, I discovered all kinds of malware after going on the library wifi. This book lays it out pretty well, from spamming to viruses to digital footprint.
